

Five Turning Points in Canada's Climate Politics

Dr. Peter Clancy

Professor, Political Science at StFX

Framing Canada's policy response to climate change is a classic challenge of multilevel governance. This presentation examines some key moments that capture dimensions of the challenge. The concept of 'path dependency' suggests that decision structures, once embedded, will constrain the prospects for future choice. In this talk Dr. Peter Clancy will explore some significant episodes along the complex and contradictory path of the past thirty years.

All are welcome.
