

Environmental Sciences And **CREATE** Seminar Series

Understanding our Changing Oceans: Many Needs and Some Solutions

Dr. Doug Wallace

Canada Excellence Research Chair in Ocean Science and Technology
Department of Oceanography, Dalhousie University

The talk will highlight changes that our oceans are undergoing, on both regional and global scales. There is a need to better characterize and understand these changes in order to be prepared for new and altered risks of the marine environment. With this as context, the talk will present a range of new research opportunities and activities focused on the North Atlantic Ocean that are arising out of the Canada Excellence Research Chair in Ocean Science and Technology and the recently-founded Halifax Marine Research Institute.

All are welcome.
